

Where do apples grow?

China

The major apple producing areas in China are along the Bohai Sea, the Yellow River lowlands, the Northern foot of the Qing-ling mountains, the Loess plateau in the Northwest and the highlands of the Southwest. The most common types of apples from China are: Red Fuji, Starkrimson, Golden Delicious, Gala and Jonagold.

The United States

Apples are the second most valuable fruit crop in the U.S. and they are harvested in the fall. Although they are not native to the U.S. they can grow in most of the 50 states, but are mostly found in Washington State, New York and Michigan.

Washington State

Washington grows nine main varieties of apples including: the Fuji, Granny Smith, Braeburn, Honeycrisp, Cripps Pink, Cameo, Red Delicious, Golden Delicious and Gala.

Michigan

Michigan also has several apple varieties like Honeycrisp, Gala, McIntosh, Empire, Jonagold and Mutsu.

New York

The state of New York is known best for the McIntosh and the Delicious apple varieties as well as the R.I. Greening and the Cortland.

Where do oranges grow?

Orange trees are widely grown in tropical and subtropical climates for their sweet fruit. The fruit of the orange tree can be eaten fresh, or processed for its juice or fragrant peel. As of 2012, sweet oranges accounted for approximately 70% of citrus production.

In 2010, 68.3 million metric tons of oranges were grown worldwide, production being particularly prevalent in [Brazil](#) and the U.S. states of [Florida](#) and [California](#).
